

NEXT MOVE

AI Career Clarity Platform

PRODUCT REQUIREMENTS DOCUMENT (PRD)

MVP Edition — Intern Execution Guide

Version	1.0 — MVP
Date	March 2026
Status	Ready for Development
Target Launch	4 Weeks from Kick-off
Team	3 Interns: Frontend · Backend · Design
Product Type	Web App + Mobile App (B2B2C SaaS)

"Every year, 25 million Indian students guess their future. Next Move exists so that no student ever has to guess again."

1. Executive Summary

This document is your complete guide to building the Next Move MVP. It is written in plain language so that all three interns — whether you work on design, frontend, or backend — can read it, understand it, and build the right thing.

1.1 What is Next Move?

Next Move is an AI-powered career guidance platform for Indian students in Class 10 and 12. Most of these students — especially in Tier 2 and Tier 3 cities — have no access to a career counsellor. They make one of the biggest decisions of their life based on guesswork or family pressure.

Next Move gives every student a personal AI career guide that understands them, shows them careers that fit, and builds them a clear roadmap — starting at Rs 299 per month.

1.2 Who Uses It?

User Type	Who They Are	What They Want
Student	Class 10 & 12, age 15–17, Tier 2/3 cities primarily	Understand which career suits them
Parent	The person paying for the subscription	Proof their child is on the right track
School Admin	Principal or coordinator of a partner school	Career data for all students in one dashboard

1.3 MVP Goal — What We Build in 4 Weeks

□ **Goal** A working MVP where a student can sign up, complete a career assessment, receive a Career Clarity Report, and chat with an AI career mentor.

The MVP is built on 4 core pillars (from the business model document):

- Career Tasting — AI-simulated career experiences
- AI Career Mentor — personalised AI guide with persistent memory
- AI Career Chatbot — 24/7 Q&A in Hindi and English
- Career Clarity Report — deep personalised career report

□ **Scope Rule** We are NOT building all 10 pillars in Month 1. Features 5–10 are Phase 2. Stay focused on the 4 MVP pillars only.

2. The Problem We Are Solving

Before writing a single line of code, understand the problem deeply. This helps you make better decisions throughout development.

2.1 Scale of the Problem

Fact	Data
Students making career decisions every year	25 million
Students relying only on family for career advice	90%
Students who feel unprepared for the workforce	85%
Cost of premium counselling per student	Rs 25,000+
Tier 2/3 schools with a trained counsellor	Nearly 0%
Careers most students are aware of	5–10 out of 5,000+ options

2.2 Why Existing Solutions Fail

What Students Try	Why It Fails
Online career tests	Give scores but no journey — one-time, outdated, no follow-up
Course platforms	Tell students what to learn, not who they are or what fits them
Human counsellors	Rs 5,000–25,000 per session, metro cities only, cannot scale
ChatGPT	No memory, no India context, no structured journey
Google Search	Only useful if you already know what to search — useless for discovery

□ **Key Insight** There is no affordable, AI-powered, India-specific, continuously guiding career platform for students. That is the gap Next Move fills.

3. User Personas

A persona is a fictional but realistic description of your user. When designing a screen or building a feature, always ask: 'Will Priya understand this? Will Ramesh trust this?'

Persona 1 — Priya (The Student)

Detail	Description
Age	16 years old
City	Nagpur (Tier 2 city)
Class	Class 10, appearing for board exams
Problem	Her parents want her to do Engineering. She likes design but is scared to say so.
Goal	Find out if there is a real career in design — and get data to show her parents
Device	Uses her father's Android phone, 4G internet
Language	Speaks Hindi, reads English but prefers Hindi UI

Persona 2 — Ramesh (The Parent)

Detail	Description
Age	44 years old
Occupation	Small business owner in Indore
Problem	Worried his daughter will make the wrong career choice. Spent Rs 8,000 on a counsellor who gave a useless PDF.
Goal	See weekly proof that his child is progressing toward a clear, viable career
Device	Uses WhatsApp heavily on Android
Willingness to Pay	Will pay Rs 299/month if he sees real, weekly progress

Persona 3 — Ms. Sharma (The School Admin)

Detail	Description
Role	Academic Coordinator at a private school in Pune (800 students)
Problem	Students make stream choices without guidance every year. Parents blame the school.
Goal	Give students a career tool without hiring a counsellor. Show data in NAAC reports.
Device	Uses laptop and desktop browser
Concern	Data privacy, ease of student onboarding, and visible engagement proof

4. Product Scope — What We Build vs. What We Skip

Scope creep is the #1 reason MVPs fail to launch on time. If something is not in the IN SCOPE list, do not build it this month.

4.1 MVP — In Scope

Feature	What It Does	Priority
User Onboarding & Auth	Sign up, OTP login, profile creation (name, class, city, interests)	P0 — Must Have
Interest & Aptitude Assessment	20-question quiz mapping personality, interests, and strengths	P0 — Must Have
AI Career Chatbot	24/7 chat in Hindi & English answering career questions	P0 — Must Have
Career Clarity Report	Personalised report: top 10 careers, strengths, Clarity Score	P0 — Must Have
Career Tasting (Basic)	5-min text-based simulation of 3 careers from the report	P1 — Should Have
AI Career Mentor (Basic)	Weekly AI message summarising student progress and next step	P1 — Should Have
Parent Dashboard (Basic)	Web page: Clarity Score, careers explored, weekly AI summary	P1 — Should Have
School Admin Portal (Basic)	Admin login, student list with Clarity Scores	P2 — Nice to Have

4.2 Out of Scope — Skip in Month 1

☐ **Do Not Build Yet** Peer Cohorts · Career Reality TV · Real Professional Connect · Stream & College Predictor (full) · Payment gateway · Ad system · Regional language full rollout

If a stakeholder asks for these, respond: 'That is on the roadmap for Month 2–3. We will build it after MVP validation.'

5. Feature Specifications

Each feature below has: what the user does, acceptance criteria (how we know it is done), and edge cases to handle.

Feature 1 — User Onboarding & Authentication

User Steps:

1. Opens the app or website — sees a Welcome Screen
2. Taps 'Get Started' — fills in Name, Mobile, Class (10 or 12), City
3. Receives 6-digit OTP on mobile — enters it to verify
4. Sets a 4-digit PIN for future logins
5. Lands on Home Dashboard

Acceptance Criteria:

- OTP delivered within 5 seconds
- Wrong OTP shows a clear error — locked after 3 wrong attempts (30 min)
- Returning user lands on their dashboard, not the assessment again
- Works correctly on both mobile app and desktop browser

Edge Cases:

- Same mobile number registered twice → show 'Welcome back — login instead'
- No internet connection → show offline error, do not crash the app

Feature 2 — Career Assessment Quiz

User Steps:

6. Sees 'Start Your Career Assessment' prompt on Home Dashboard
7. Answers 20 questions in a card-tap format — one question per screen
8. Questions cover: What do you enjoy? What are you good at? How do you prefer to work?
9. Progress bar visible at top (e.g. '5 of 20')
10. After Q20: sees loading screen — 'AI is building your Career DNA...'

Sample Question Types:

Question	Answer Format
When you have free time, what do you enjoy most?	4 option cards — tap to select
Which subject do you find easiest?	4 option cards — tap to select
How do you prefer to work?	Slider: Alone ←→ With a team
What matters most to you in a career?	Drag to rank 4 options

Acceptance Criteria:

- User can go back to previous question without losing answers

- If app is closed mid-quiz, answers are saved — user resumes from where they stopped
- Assessment cannot be retaken within 30 days
- Report generated within 30 seconds of quiz completion

Feature 3 — Career Clarity Report

What the report contains:

11. Career DNA Summary — 3-line AI-generated description of who this student is
12. Top 10 Career Matches — each card shows: Career name, Match % (e.g. 87%), salary range, education path
13. Your Strengths — top 3 strengths with simple explanations
14. Clarity Score — a number 0–100 showing career direction confidence
15. Recommended Next Step — one clear action for the student to take today

Acceptance Criteria:

- Report available immediately after quiz completion
- Shareable as PDF or WhatsApp link
- Parent can view same report from Parent Dashboard
- Report refreshes if student retakes assessment after 30 days

□ **Design Note for Intern C** The Career Clarity Report is the most important screen. It is the 'wow moment' that makes parents want to pay. Make it visually rich, easy to read, and shareable.

Feature 4 — AI Career Chatbot

User Steps:

16. Taps chat icon from anywhere in the app
17. Types a question in Hindi or English — e.g. 'UX design mein kitni salary milti hai?'
18. Gets a clear, friendly answer within 3 seconds
19. Can ask follow-up questions — AI remembers the conversation context

What the AI answers:

- Career information: salaries, job roles, day-in-the-life
- Stream guidance: Science vs Commerce vs Arts
- Questions about the student's own report
- College and entrance exam information

Acceptance Criteria:

- Response time under 3 seconds
- Handles Hindi and English input seamlessly
- If unsure, AI says: 'I am not certain — here is what I do know' — never fabricates facts
- Free users: 5 questions per day. Paid users: unlimited
- Conversation history saved for 90 days

Feature 5 — Career Tasting (Basic Version)

User Steps:

20. From report, taps a career card (e.g. 'UX Designer')
21. Taps 'Taste This Career' button
22. Reads a real work scenario and makes decisions across 5 questions
23. Example: 'You are a UX Designer. Your manager shows user feedback. What do you do?' → 3 choices
24. After Q5: receives a short debrief — 'You handled this like a designer! Here is what real designers do...'

Acceptance Criteria:

- Free users: 1 demo taste only
- Paid users: 2 new tastes unlocked per month
- Each taste takes 5–8 minutes
- Taste results saved to student's Career Taste Portfolio

Feature 6 — Parent Dashboard

What parents see:

25. Clarity Score trend — a simple line graph for the last 4 weeks
26. Careers explored this week
27. AI Mentor weekly summary — 2 to 3 sentences about the student's activity
28. One recommended parent action — e.g. 'Ask Priya about UX Design this weekend'

How parents access it:

- Student shares a Parent Dashboard link via WhatsApp — no app download required
- Parent opens it on mobile browser — immediately sees the dashboard
- Parent can optionally create an account for weekly email updates

Acceptance Criteria:

- Dashboard loads fully on a mobile browser without requiring app installation
- Data refreshes every Sunday at 8am automatically
- Parent cannot view the student's private chat — only the AI summary

6. Student Workflow — End to End

This is the complete journey from first open to engaged user. Design all wireframes based on this exact flow.

Step	Screen / Action	What Happens	Time
1	Open app or website	Student lands on Welcome Screen	10 sec
2	Tap 'Get Started'	Registration: Name, Mobile, Class, City	2 min
3	OTP Verification	6-digit OTP sent. Student enters it.	1 min
4	Quick Interest Snapshot	3 fast questions to personalise onboarding	1 min
5	Home Dashboard	Sees prompt: 'Take your Career Assessment to unlock your report'	30 sec
6	Start Assessment	20-question quiz, one screen per question, progress bar visible	10–15 min
7	Report Loading	Animation: 'AI is building your Career DNA...'	30 sec
8	Career Clarity Report	Top 10 careers, strengths, Clarity Score revealed	5 min
9	Share Report	Student shares report link to parents via WhatsApp	30 sec
10	Career Taste	Student taps Career #1 and starts 5-min scenario simulation	5 min
11	AI Chat	Student asks questions in Hindi or English — ongoing usage	Daily
12	Day-7 Return	Push notification: 'Your Clarity Score decayed — take action!'	Day 7

6.1 Wireframe Guide for Design Intern

Design wireframes for these 12 screens. Start with black-and-white layouts. Focus on flow and layout, not colours. Colours come in Week 2 when you convert to high-fidelity.

Screen	Key UI Elements	Important Design Notes
Welcome Screen	Logo, tagline, 'Get Started' CTA, 'Login' link	First impression — warm, trustworthy, confident
Registration	Name, Mobile, Class dropdown, City, 'Send OTP' button	Keep it short — only essential fields, no friction
OTP Screen	6 input boxes, 30-second countdown timer, 'Resend' link	Timer must count down. Auto-advance when 6 digits filled.
Home Dashboard	Clarity Score circle, Assessment CTA, Quick Actions, Bottom nav	If no report: show big CTA. If report exists: show score.
Assessment Quiz	Question text, 4 answer cards, progress bar, Back button	One question per screen — no scrolling needed

Screen	Key UI Elements	Important Design Notes
Report Loading	Progress animation, fun loading messages	Should feel exciting — not a boring spinner
Career Clarity Report	DNA summary, career cards with match %, Clarity Score, Share button	Most important screen — deserves the most design effort
Career Detail Page	Career name, salary, education path, 'Taste This Career' button	Clean, factual, scannable in 30 seconds
Career Taste	Scenario text, 3 answer options, 'Q1 of 5' progress indicator	Should feel like a game, not an exam
AI Chat	Chat bubbles, text input bar, suggested starter questions	WhatsApp-style familiarity — students already know this pattern
Parent Dashboard	Clarity Score graph, weekly summary card, recommended action	Mobile browser only — no app login required
School Admin Portal	Student list table, Clarity Score column, filter by class	Desktop-first — principals use laptops

7. Technical Architecture

This section tells the backend intern what to build and how everything connects. The frontend intern should also read it to understand what data comes from the API.

7.1 Recommended Tech Stack

Layer	Technology	Why This Choice
Frontend Web	React.js + Tailwind CSS	Fast to build, huge ecosystem, easy to maintain
Mobile App	React Native	One codebase for iOS and Android — reuses web components
Backend API	Node.js + Express.js	JavaScript throughout — less context switching for the team
Database	PostgreSQL (primary) + Redis (cache)	Reliable relational DB + fast caching for chat responses
AI / LLM	OpenAI GPT-4o API	Powers chatbot, mentor messages, and report generation
File Storage	AWS S3 or Cloudflare R2	Stores generated PDF reports
Authentication	MSG91 (OTP) + JWT tokens	India-specific SMS delivery + standard auth tokens
Hosting	Railway.app or Render (backend) + Vercel (frontend)	Free/low-cost tiers suitable for MVP scale
Error Monitoring	Sentry (free tier)	Catches crashes and API errors automatically

7.2 Core Database Tables

Users

Field	Type	Description
user_id	UUID	Unique identifier — primary key
name	String	Student's full name
mobile	String	Phone number — used for OTP login
class_grade	Integer	10 or 12
city	String	Student's city
school_name	String	School name
role	Enum	student / parent / school_admin
subscription_tier	Enum	free / clarity_pro / clarity_max
created_at	Timestamp	Registration date

Assessments

Field	Type	Description
assessment_id	UUID	Primary key
user_id	UUID	Foreign key → Users table
answers	JSON	All 20 questions and selected answers
completed_at	Timestamp	When quiz was finished
can_retake_at	Timestamp	Exactly 30 days after completion

Career Reports

Field	Type	Description
report_id	UUID	Primary key
user_id	UUID	Foreign key → Users table
clarity_score	Integer	0 to 100
top_careers	JSON	Array of top 10 careers with match percentages
strengths	JSON	Top 3 strengths with explanations
dna_summary	String	3-line AI-generated text summary of the student
pdf_url	String	URL to shareable PDF stored on S3
generated_at	Timestamp	Report creation timestamp

Chat Messages

Field	Type	Description
message_id	UUID	Primary key
user_id	UUID	Foreign key → Users table
role	Enum	user / assistant
content	Text	Message text
language	Enum	en / hi
created_at	Timestamp	Message timestamp

7.3 API Endpoints to Build

Method	Endpoint	What It Does
POST	/api/auth/send-otp	Sends OTP to the given mobile number
POST	/api/auth/verify-otp	Verifies OTP — returns JWT auth token
POST	/api/users/profile	Creates or updates user profile
GET	/api/assessment/status/:userId	Returns: not_started / in_progress / complete
POST	/api/assessment/submit	Submits answers — triggers AI report generation

Method	Endpoint	What It Does
GET	/api/report/:userId	Returns the full Career Clarity Report as JSON
GET	/api/report/:userId/pdf	Returns the PDF download URL
POST	/api/chat/message	Sends user message to AI — returns AI response
GET	/api/chat/history/:userId	Returns last 50 chat messages for the user
GET	/api/careers/taste/:careerId	Returns scenario questions for a career taste
POST	/api/careers/taste/submit	Submits taste answers — returns debrief
GET	/api/parent-dashboard/:userId	Returns all parent dashboard data
GET	/api/admin/school/:schoolId/students	Returns student list for school admin

8. 4-Week MVP Execution Plan

This is your sprint plan. Each intern has clear tasks per week. Work in parallel — do not wait for another intern to finish before you start your work.

□ **Team** Intern A = Frontend (React + React Native) | Intern B = Backend (Node.js + API) | Intern C = Design (Figma wireframes + UI)

Week 1 — Foundation (Days 1–7)

Goal: Project setup done, design system agreed, app skeleton running, OTP auth working.

Who	Task	Done When...
Intern C	Create wireframes for all 12 screens (Section 6 list)	All wireframes reviewed and approved
Intern C	Define colour palette, fonts, button styles — share design system with Intern A	Figma design system file shared
Intern B	Set up Node.js project + PostgreSQL + folder structure on GitHub	GET /api/health returns 200 OK
Intern B	Build /auth/send-otp and /auth/verify-otp endpoints	OTP send and verify work via Postman
Intern B	Create all database tables with correct fields and relationships	SQL migration files committed
Intern A	Set up React web project + Tailwind + React Native mobile project	Both run on localhost without errors
Intern A	Build Welcome Screen and Registration screens	OTP flow works end-to-end with real API
ALL	Daily 15-minute standup at 10am — log notes in shared Notion doc	Every day, no exception

Week 2 — Core Features (Days 8–14)

Goal: Assessment quiz and Career Clarity Report work end-to-end with real AI-generated data.

Who	Task	Done When...
Intern C	High-fidelity designs for Assessment + Report screens	Designs handed to Intern A
Intern C	Design Career Card component, Clarity Score circle, all report elements	All report components in Figma
Intern B	Build assessment submission API — save answers to database	Answers stored correctly in DB
Intern B	Integrate OpenAI API — generate Career Report JSON from answers	Test answers return valid report JSON

Who	Task	Done When...
Intern B	Build GET /api/report/:userId + PDF generation via AWS S3	PDF accessible via URL
Intern A	Build 20-question Assessment Quiz with progress bar and back navigation	Can complete quiz — answers saved
Intern A	Build Career Clarity Report screen consuming real API data	All report sections show correct data
Intern A	Add WhatsApp share button on Report screen	Tapping share opens WhatsApp with link

Week 3 — AI Chat + Career Tasting + Parent Dashboard (Days 15–21)

Goal: Chatbot, Career Tasting, and Parent Dashboard are all functional.

Who	Task	Done When...
Intern C	High-fidelity designs for Chat, Career Taste, Parent Dashboard	Designs handed to Intern A
Intern C	Design loading animations for report generation and taste debrief	Animation specs ready for Intern A
Intern B	Build chat API with OpenAI + conversation history + 5 msg/day free limit	Chat returns response, remembers last 10 messages
Intern B	Add Hindi language detection — Hindi input returns Hindi response	Test with 5 Hindi messages, all replied in Hindi
Intern B	Build Career Taste endpoints — scenario questions + answer scoring + debrief	5-question taste works end-to-end
Intern B	Build Parent Dashboard API returning all required fields	API returns Clarity Score trend, weekly summary, action
Intern A	Build AI Chat screen — chat bubbles, text input, suggested questions	Can chat, see history, use in Hindi
Intern A	Build Career Taste screens — scenario, 3 options, debrief screen	Complete 5-question taste flow works
Intern A	Build Parent Dashboard as public web page (no app login needed)	Loads on mobile browser — no install required

Week 4 — Polish, Test & Launch (Days 22–30)

Goal: Fix bugs, test with 5 real users, deploy to production, and launch the MVP.

Who	Task	Done When...
Intern C	Full UI audit — check all screens match designs, flag every inconsistency	All P0 bugs listed with screenshots

Who	Task	Done When...
Intern C	Create 5 app store screenshots and a landing page hero image	Assets ready for deployment
Intern B	API performance test — all endpoints respond in under 2 seconds	Performance test report passed
Intern B	Set up Sentry error monitoring on production	Test error appears in Sentry dashboard
Intern B	Deploy backend to Railway/Render production environment	Live backend URL accessible
Intern A	Fix all UI bugs from Intern C's audit	No visual bugs on mid-range Android + Chrome desktop
Intern A	Deploy web app to Vercel — test complete flow on live URL	All 12 screens work correctly on live URL
Intern A	Mobile: test APK on Android device — share to 5 test users	5 testers complete full flow on their phones
ALL	User testing with 5 real students — record sessions (use Loom)	5 recordings watched by all interns
ALL	Fix top 5 issues discovered in user testing	Critical bugs resolved before public launch

9. How to Work Together

Three interns can build something remarkable if communication is good. Follow this process every day.

9.1 Daily Standup — 15 Minutes at 10am

Every morning, each intern answers three questions:

- What did I complete yesterday?
- What will I do today?
- Is anything blocking me? (Resolve it in this call — do not let it sit)

 **Rule** If a blocker is not resolved within 24 hours, escalate to the PM immediately. Do not silently fall behind schedule.

9.2 Tools

Tool	Used For	Free?
Notion	PRD tracking, task board, standup notes	Yes
Figma	All wireframes and high-fidelity designs	Yes (free tier)
GitHub	All code — one repo per project (web + mobile + backend)	Yes
Postman	Backend intern tests all APIs before handing to frontend	Yes
Discord or WhatsApp	Quick async communication between interns	Yes
Loom	Record short video updates instead of long calls	Yes (free tier)

9.3 Definition of Done

A task is 'Done' only when ALL of these are true:

29. The feature works exactly as described in Section 5 of this PRD
30. It has been tested on at least one real mobile device AND one desktop browser
31. The code is committed and pushed to GitHub
32. The other two interns have been told it is done — in standup or on Discord

 **Golden Rule** Never say 'done' if it only works on your own laptop. Test on a real device or a different browser first.

10. MVP Success Metrics

These are the metrics we track after launch. The goal in Month 1 is not millions of users — it is proof that real users get real value.

Metric	Month 1 Target	Why It Matters
Students who complete the full assessment	80% of signups	Drop-off here = the quiz is too long or confusing
Students who read their full report	70% of completers	The report is the wow moment — it must be compelling
Students who try at least 1 Career Taste	40% of report readers	Tasting drives retention — this tests product stickiness
Parents who view the Parent Dashboard	50% of paid students	Parent buy-in is essential for subscription renewal
AI Chat messages per active student per week	More than 5	High chat volume = high product engagement
Net Promoter Score (NPS)	Above 40	Measures whether users recommend Next Move to friends
Day-7 return rate	Above 40%	Do students come back after their first week?
Month-1 paying subscribers	At least 50	Proves someone will pay — even 50 validates the business model

10.1 What to Fix if Metrics Fail

Failing Metric	Most Likely Cause	Fix
Assessment completion < 80%	Quiz is too long or questions are confusing	Cut from 20 to 12 questions. Simplify the language.
Report reads < 70%	Report is hard to understand or looks boring	Rewrite in simpler language. Add visuals and infographics.
Day-7 retention < 40%	No reason to return after seeing the report	Add push notifications. Weekly Clarity Score decay email.
NPS < 40	Report does not match student's real interests	Improve AI prompt quality. Add feedback button on report.

11. Risks & How to Handle Them

Knowing risks in advance helps the team react faster. Review this list in Week 1 standup.

Risk	Likelihood	Impact	Action
OpenAI API is slow or expensive	Medium	High	Cache all report outputs. Set a monthly API spend limit of Rs 5,000. Use GPT-4o-mini for chatbot, GPT-4o only for report generation.
OTP delivery fails in Tier 2 cities	Medium	High	Use MSG91 — India-specific SMS. Test with 10 different mobile carriers before launch.
Students drop off mid-assessment	High	High	Save progress after every question. Allow resume at any time. Cut to 12 questions if completion drops below 70%.
One intern gets blocked and delays others	Medium	High	Intern B must document all APIs in Postman by Day 3. Intern A uses mock data while real APIs are built.
Report quality is poor (wrong career matches)	Medium	Critical	Manually review 20 generated reports in Week 2. Refine the AI prompt before launch.
Mobile app rejected by Play Store	Low	Medium	Use APK direct install for testing in Month 1. Only submit to public Play Store in Month 2.

12. Glossary

If you encounter a term you do not understand, check here first.

Term	Simple Explanation
MVP	Minimum Viable Product — the smallest version of the product that is good enough to test with real users
B2B2C	Business to Business to Consumer — Next Move sells to schools (B2B) who give access to their students (B2C)
API	How the frontend and backend talk to each other — like a waiter taking your order to the kitchen and returning with food
OTP	One-Time Password — the 6-digit code sent to your phone to confirm your identity
Clarity Score	A number from 0 to 100 showing how confident a student is about their career direction
Career Tasting	A 5-minute simulation where a student experiences what a career actually feels like day-to-day
LLM / AI Model	The AI brain (OpenAI GPT-4o) that generates reports, powers the chatbot, and writes mentor messages
Retention	Whether users return to the app after their first visit — high retention means the product is genuinely valuable
NPS	Net Promoter Score — one question: 'How likely are you to recommend this to a friend?' Scored 0 to 10.
Churn	When a paying user cancels their subscription — high churn means the product is not valuable enough to keep
P0 / P1 / P2	Priority levels: P0 = must have for launch, P1 = should have, P2 = nice to have if time allows
Standup	A short 15-minute daily team meeting where everyone shares progress and blockers
Wireframe	A black-and-white layout sketch of a screen — shows structure and flow before adding colour or style
Acceptance Criteria	The exact conditions that must all be true before a feature is considered complete and done
Edge Case	An unusual situation that might break the app — like entering wrong OTP 3 times or losing internet mid-quiz

— End of Document —

Next Move · MVP PRD v1.0 · March 2026 · Confidential

"Confusion → Clarity → Confidence → Decision Ownership"
